# CRISTIAN MARTIN

Software Engineer — Full-stack · iOS · AI/ML

Charlotte, NC · (786) 229-6421 · cristian.msf23@gmail.com · github.com/cristian-martin · linkedin.com/in/cristian-flores-dev

## SUMMARY

Software engineer who designs and ships complete products end to end: an iOS/ARKit app with its own trained CoreML model and Next.js backend, a Stripe-to-Stellar payments app, and the Python toolkit behind an autonomous trading agent. Background in QA automation; strong on testing, measurement, and documenting what didn't work. Seeking a full-stack, mobile, or AI-adjacent engineering role in Charlotte or remote.

## PROJECTS

**Tristim — skin-tone colorimetry & AI shade-matching platform (iOS + web)** 2025 – 2026 · Founder, sole engineer

- Built a SwiftUI + ARKit iOS app with an on-device CoreML undertone/depth classifier (MobileNetV3, focal loss; ~100 ms inference) and Gemini Vision fallback; 96% of scans classified on-device with no image leaving the phone.
- Implemented CIELAB / ΔE2000 color engine in Swift and TypeScript, validated against 15k spectrophotometer reference measurements; two-path scoring (classification-first vs. ΔE match) across 14 product categories.
- Designed a Next.js 15 backend with ~40 API routes: Vertex AI + Gemini recommendations, embedding search, Redis caching, Apify product-feed ingestion, Snap Camera Kit AR try-on.
- Shipped a self-improving ML loop: Cloudflare Worker + D1 collects consented signals → GitHub Actions retrains and exports to CoreML → app pulls the update; Python/OpenCV pipeline extracts Lab color from product images.
- Ran controlled lighting experiments (197 frames, 3 conditions) proving the camera cannot recover b*; re-architected to classification-first and documented the dead end.

Swift · SwiftUI · ARKit · CoreML · PyTorch · TypeScript · Next.js · Vertex AI · Gemini · Cloudflare Workers · D1 · GitHub Actions · Python · OpenCV

**StellarTip — card-to-stablecoin tipping for hospitality workers** 2026 · Solo

- Guest scans a worker's QR code and pays by card; a verified Stripe webhook triggers a USDC payout on Stellar, making payouts idempotent and settling in seconds.
- Integrated the Stellar SDK (automatic custodial wallet provisioning with USDC trustline, memo'd payments, explorer links); Postgres + Drizzle ORM on Neon, Auth.js magic-link sign-in, worker and admin dashboards.

TypeScript · Next.js 16 · React 19 · Stripe · Stellar SDK · Drizzle ORM · PostgreSQL · Auth.js · Tailwind

**OpenClaw Wealth Engine — research & execution toolkit for an autonomous trading agent** 2026 · Solo

- Wrote 19 Python CLIs with JSON-only output for an LLM agent: SEC EDGAR 13F parser and XBRL fundamentals, FRED macro, FMP valuations/transcripts, Marketaux sentiment, OpenFIGI, USASpending, PatentsView.
- Built a cross-fund consensus scorer, a dynamic risk engine that adapts position limits from realized P&L and VIX regime, and an Alpaca execution layer with bracket orders, emergency exit,, append-only audit logs, and a scheduled morning brief delivered via Telegram (~10k LOC).

Python · pandas · NumPy · Alpaca API · SEC EDGAR · FRED · yfinance · agent tooling

## EXPERIENCE

**iOS / AR Developer Intern — City of Coral Gables** Coral Gables, FL · Jul 2024 – Sep 2024

- Built augmented-reality experiences with ARKit and SwiftUI; implemented 3D object placement, rotation, and anchoring for stable AR scenes and designed the SwiftUI interaction layer.

**QA Automation Engineer — Temperies Solution** Remote · Jan 2019 – Feb 2020

- Built and maintained automated end-to-end suites for multiple client apps with TestCafe; covered REST APIs and front-ends with TestCafe and SoapUI; authored test cases and ran regression cycles.

**IT Support Specialist — Kelly Services** Miami, FL (Remote) · Feb 2018 – Jan 2019

- Provided first-line support for proprietary software, diagnosed issues, and escalated to the appropriate tier against response-time targets.

## SKILLS

| | |
|---|---|
| **Languages** | TypeScript, JavaScript, Swift, Python, Java, SQL |
| **Frontend & Mobile** | React, Next.js, Tailwind CSS, SwiftUI, ARKit, Android (Java) |
| **Backend & Data** | Node.js, REST APIs, PostgreSQL, Drizzle ORM, Redis, serverless (Vercel, Cloudflare Workers) |
| **AI / ML** | LLM integration (Gemini, OpenAI), Vertex AI, CoreML, PyTorch, OpenCV, embeddings, agent tooling |
| **Testing & Delivery** | Playwright, TestCafe, SoapUI, GitHub Actions, Git, ESLint |
| **Domains** | Color science (CIELAB, ΔE2000), payments (Stripe), Stellar blockchain, computer vision, AR/XR |

## EDUCATION & CERTIFICATIONS

**B.S. Information Systems Technology — Miami Dade College, Miami, FL** Dec 2025

CS50x (Python) · iPhone App Development (Swift) · CompTIA A+ · Languages: English (advanced), Spanish (native)
